PROFESSIONAL SUMMARY

Computer Science Engineering student specializing in Machine Learning with hands-on experience building AI-powered applications, machine learning systems, NLP pipelines, and enterprise software integrations. Currently working as an **AI System Engineer Intern at Centific**, contributing to agent-based workflows, LLM applications, REST API integration, and Microsoft Dynamics 365 Proof of Concepts. Experienced in taking systems from problem definition and data processing to model development, application integration, testing, and deployment.

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript

AI / Machine Learning: Agentic AI, LLM Applications, NLP, OCR Systems, Classification, Regression, Clustering, K-Modes, Dataset Engineering, Data Processing

Frameworks / Libraries: PyTorch, Pandas, NumPy, Django, Streamlit

Tools / Technologies: Git, GitHub, REST APIs, Microsoft Dynamics 365, Dataverse, Docker, Tesseract OCR, Gemini API, Vercel

EXPERIENCE

Centific

Hyderabad, India

AI System Engineer Intern

Jun 2026 – Present

- Contributing to an AI-powered IT Help Desk Agent, with work spanning agent orchestration, LLM workflows, REST API integration, and end-to-end system integration.
- Developed a Proof of Concept for Microsoft Dynamics 365 integration by exploring Dataverse APIs, authentication patterns, and enterprise data retrieval for AI-driven workflows.
- Improved system workflows through prompt refinement, modular code design, scenario-based testing, debugging, and integration of multiple automation components.

PROJECTS

Explainable Clinical Entity Recognition

Python / Hugging Face / PyTorch

- Developed an NLP pipeline to extract clinical entities from unstructured electronic health records while incorporating de-identification for privacy-aware processing.
- Integrated explainability techniques to improve model transparency and achieved approximately **72% accuracy** on biomedical named entity recognition tasks.

Handwritten Assignment Grader

Python / Tesseract OCR / Gemini API / Streamlit

- Engineered an end-to-end AI-powered grading workflow that extracts handwritten content using OCR and generates structured evaluation and feedback using language models.
- Reduced manual grading effort by approximately **60–70%** while improving consistency across handwritten submissions.

Rheumatoid Arthritis Patient Stratification

Python / Pandas / K-Modes

- Developed a clustering-based machine learning system to identify interpretable patient groups from categorical clinical data using K-Modes clustering.
- Contributed to a **patent-related methodology** for structured patient stratification and data-driven clinical analysis.

ACHIEVEMENTS

- Winner – Centific AI Premier Hackathon 2.0**; developed an AI-driven pricing intelligence solution and generated **155,000+ synthetic records** during the hackathon.
- Contributed to a **patent-related methodology** for Rheumatoid Arthritis Patient Stratification using K-Modes clustering.
- Built **12+ projects** across AI, Machine Learning, Full-Stack Development, and Big Data, and solved **150+ Data Structures and Algorithms problems**.

EDUCATION

Lovely Professional University

Punjab, India

B.Tech in Computer Science and Engineering – Machine Learning

2023 – 2027

CGPA: 8.32
