SUMMARY

Computer Science Engineering student specializing in Machine Learning with hands-on experience building AI-powered applications, machine learning systems, NLP pipelines, and enterprise software integrations. Currently working as an AI System Engineer Intern at Centific, contributing to agent-based workflows, LLM applications, REST API integration, and enterprise Proof of Concepts. Experienced in end-to-end development, from data processing and model development to application integration and deployment.

EXPERIENCE

Centific

Hyderabad, India

AI System Engineer Intern

Jun 2026 – Present

- Contributing to an AI-powered IT Help Desk Agent, with work spanning agent orchestration, LLM workflows, REST API integration, and end-to-end system integration.
- Developed a Proof of Concept for Microsoft Dynamics 365 integration by exploring Dataverse APIs, authentication patterns, and enterprise data retrieval for AI-driven workflows.
- Improved system workflows through prompt refinement, modular code design, scenario-based testing, debugging, and integration of multiple automation components.

SKILLS

- Languages:** Python, C, C++, Java, JavaScript
- Machine Learning:** Natural Language Processing (NLP), OCR-based Systems, Healthcare AI, Classification & Regression Models, Clustering (K-Modes), Model Training Pipelines, Data Processing
- Frameworks & Libraries:** Django, Flask, React, PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib
- Tools/Platforms:** Git, GitHub, Streamlit, Vercel, TensorFlow, Jupyter Notebook, VS Code, MySQL, SQLite, Tesseract OCR, Gemini API, Gmail SMTP, Chart.js, pytsx3, googletrans, tkinter
- Web Development:** HTML, CSS, Bootstrap, Tailwind CSS, JavaScript, Responsive UI Design
- Core Concepts:** Data Structures & Algorithms, Problem Solving, Optimization Techniques, System Design Basics
- Soft Skills:** Teamwork, Leadership, Adaptability, Critical Thinking, Communication

PROJECTS

Centific AI Pricing Intelligence Agent | *Agentic AI, Dataset Engineering, Workflow Automation* **Hackathon Winner**

- Developed an AI-driven agentic system to automate enterprise pricing intelligence workflows from RFP ingestion to pricing output.
- Collaborated in a cross-functional team to analyze BRDs, identify workflow gaps, and design an MVP architecture.
- Generated and processed 1,55,000+ synthetic records for training, testing, and workflow validation.
- Secured Winner position in Centific AI Premier Hackathon 2.0 and received a 6-month internship offer from Centific.

SMART INDIA MAPPING USING BIG DATA | *Python, Big Data, Data Processing, Visualization*

[GitHub](#)

- Built a data-driven system to process and analyze large-scale geographical and socio-economic datasets across multiple regions.
- Designed data processing pipelines using Python and Pandas to clean, transform, and structure high-volume datasets for analysis.
- Developed visualizations to identify regional trends, patterns, and correlations for improved data-driven insights.
- Enabled efficient interpretation of complex datasets to support decision-making and analytical exploration.

Explainable Clinical Entity Recognition (EHR NLP System) | *Python, HuggingFace, NLP, Streamlit*

[GitHub](#)

- Developed an end-to-end transformer-based NLP pipeline to extract clinical entities from electronic health records (EHR) while ensuring patient data privacy.
- Implemented de-identification techniques with more than 10 PHI masking patterns to anonymize sensitive healthcare information.
- Integrated explainable AI components to provide interpretable model outputs, improving trust and transparency in predictions.

- Achieved approximately 72% model accuracy on biomedical named entity recognition tasks using domain-specific datasets.
- Designed a structured workflow for preprocessing, tokenization, model training, and inference visualization.

Rheumatoid Arthritis Patient Stratification | *Python, Pandas, K-Modes, Streamlit, Matplotlib* [GitHub](#) | [Live](#)

- Built a machine learning system for clustering rheumatoid arthritis patients using categorical clinical and socioeconomic data.
- Applied K-Modes clustering algorithm to segment patient groups based on comorbidities, lifestyle factors, and demographics.
- Developed clinically interpretable subgroup analysis to assist in personalized healthcare decision-making.
- Integrated visualization tools to present cluster distributions and patterns effectively.
- Contributed to a patent-related methodology focused on structured patient stratification techniques.

Handwritten Assignment Grader | *Python, Streamlit, Tesseract OCR, Gemini API* [GitHub](#) | [Live](#)

- Engineered an AI-powered evaluation system to automate grading of handwritten assignments using OCR and large language models.
- Designed a complete pipeline including text extraction, grammar correction, content classification, and rubric-based scoring.
- Integrated Gemini API to generate meaningful feedback and improve evaluation consistency.
- Enabled automated analysis of diverse handwriting styles with improved accuracy.
- Reduced manual grading effort significantly while maintaining structured and unbiased assessment.

Employee Management System | *Django, Python, SQLite, Bootstrap, Gmail SMTP, Chart.js* [GitHub](#)

- Developed a multi-role enterprise-level web application supporting Admin, HR, and Employee dashboards.
- Implemented attendance tracking system with overlap detection and validation mechanisms.
- Built task management module with file attachments and real-time updates.
- Designed leave request and approval workflow with role-based access control.
- Integrated OTP-based authentication and account security features to enhance system reliability.

Exam Platform (Django LMS) | *Django, Python, MySQL, Bootstrap, Gmail SMTP* [GitHub](#)

- Designed a secure online examination platform supporting MCQ, subjective, and hybrid assessments.
- Implemented email OTP verification for secure authentication and user validation.
- Developed automated evaluation system for objective questions and structured submission handling.
- Built admin dashboard for exam management, user control, and result tracking.
- Integrated password reset and email notification workflows.

CampusMart (Campus E-commerce Platform) | *Django, Python, MySQL, CSS* [GitHub](#)

- Built a full-stack e-commerce platform tailored for campus users with end-to-end purchase functionality.
- Implemented user authentication, product listing, and dynamic browsing features.
- Designed shopping cart system with order placement and tracking capabilities.
- Developed admin panel for product and order management.
- Optimized database interactions for efficient query handling.

Home Loan Advisor | *Python, Streamlit, Gemini API* [GitHub](#) | [Live](#)

- Developed an AI-powered financial advisory application for evaluating home loan eligibility.
- Implemented EMI calculation and loan simulation features for different financial scenarios.
- Integrated conversational AI to provide personalized recommendations based on user inputs.
- Built dynamic interface with real-time updates for improved decision-making.
- Enabled contextual responses for enhanced user interaction experience.

Pathfinding Visualizer | *JavaScript, HTML, Tailwind CSS, Data Structures and Algorithms* [GitHub](#) | [Live](#)

- Built an interactive visualization tool to demonstrate pathfinding algorithms including A*, Dijkstra, BFS, and DFS.
- Implemented real-time animation of node traversal and shortest path discovery.
- Added maze generation and grid manipulation features for experimentation.
- Developed algorithm comparison mode to analyze performance differences.
- Enhanced learning experience through step-by-step visual execution.

ByteBazaar (E-commerce Website) | *HTML, CSS, JavaScript* [GitHub](#) | [Live](#)

- Designed and developed a responsive e-commerce website with modern UI components.
- Implemented product catalog browsing and structured navigation system.
- Focused on user experience through animations, transitions, and optimized layout design.

- Ensured cross-device compatibility using responsive design techniques.

Eco Tech (E-waste Awareness Platform) | *HTML, CSS, JavaScript, Bootstrap*

[GitHub](#) | [Live](#)

- Created a responsive web platform to promote awareness about electronic waste and sustainable practices.
- Developed interactive sections with visually engaging content and animations.
- Implemented Bootstrap-based components for responsive and consistent design.
- Structured content to improve user understanding of environmental impact.

AUTO-NO (Hackathon Project) | *HTML, CSS, JavaScript*

[GitHub](#)

- Developed an interactive quiz-based web application during a hackathon environment.
- Implemented dynamic UI components and user interaction logic under time constraints.
- Focused on rapid prototyping and functional delivery within limited time.

Your Buddy Speaker (Desktop Application) | *Python, tkinter, pyttsx3, googletrans*

[GitHub](#)

- Built a desktop application for multilingual translation and text-to-speech conversion.
- Implemented real-time translation using googletrans API.
- Integrated speech synthesis functionality using pyttsx3 for audio output.
- Designed user-friendly GUI using tkinter for seamless interaction.
- Enabled voice customization and language selection features.

TRAINING

Hitbullseye | *DSA Summer Training (C++)*

June'25 – Jul'25

- Completed structured training covering core Data Structures and Algorithms including arrays, strings, linked lists, stacks, queues, trees, graphs, and dynamic programming.
- Strengthened problem-solving skills by solving curated questions focused on time and space complexity optimization.
- Practiced advanced techniques such as recursion, greedy algorithms, sliding window, and STL-based implementations.
- Improved coding efficiency and logical thinking through consistent problem-solving and revision cycles.

ACHIEVEMENTS

- **Winner** – Centific AI Premier Hackathon 2.0; developed an AI-driven pricing intelligence system, generated 1,55,000+ synthetic records, and secured a 6-month internship offer from Centific.
- Contributed to a patent-related methodology in Rheumatoid Arthritis Patient Stratification using K-Modes clustering for categorical medical data.
- Built and deployed 12+ real-world projects across Machine Learning, Full-Stack Development, and AI systems.
- Completed 20+ certifications spanning Machine Learning, Networking, Web Development, and System Design.
- Solved 150+ Data Structures and Algorithms problems across LeetCode and GeeksforGeeks, focusing on optimization and problem-solving patterns.
- Actively participated in technical projects, demonstrating rapid prototyping and problem-solving skills.
