Professional Summary

Computer Science Engineering student specializing in Machine Learning with hands-on experience building AI systems across machine learning, NLP, OCR, and enterprise automation. Currently working as an AI System Engineer Intern at Centific, contributing to agent orchestration, LLM workflows, REST API integration, and enterprise Proofs of Concept. Experienced in designing modular ML pipelines covering data ingestion, validation, transformation, model training, and deployment, with growing focus on MLOps, reproducibility, data and model versioning, experiment tracking, and scalable ML system design.

Experience

Centific

AI System Engineer Intern

Hyderabad, India

Jun 2026 – Present

- Contributing to an AI-powered IT Help Desk Agent through agent orchestration, LLM workflows, REST API integration, and end-to-end system integration.
- Developed a Proof of Concept integrating Microsoft Dynamics 365 with external AI workflows using Dataverse APIs, authentication patterns, and enterprise data retrieval.
- Improved AI workflows through prompt refinement, modular code design, scenario-based testing, debugging, and integration of automation components.

Projects

Vehicle Insurance MLOps Pipeline

Python, Scikit-learn, MongoDB, AWS, Docker, GitHub Actions

- Built a modular end-to-end ML pipeline for vehicle insurance prediction with dedicated data ingestion, validation, transformation, model training, and prediction components.
- Implemented reusable configuration, artifact, exception-handling, logging, and utility layers to support maintainable and reproducible ML workflows.
- Integrated MongoDB-based data ingestion and designed an AWS/Docker deployment workflow involving S3, ECR, EC2, and GitHub Actions for CI/CD.

Handwritten Assignment Grader

Python, Tesseract OCR, Gemini API, Streamlit

- Built an AI-assisted document processing pipeline combining OCR, language-model processing, content classification, rubric-based scoring, and automated feedback generation.
- Designed a modular Streamlit workflow for text extraction, grammar correction, evaluation, and structured feedback from handwritten assignments.

Rheumatoid Arthritis Patient Stratification

Python, Pandas, K-Modes, Streamlit

- Developed an unsupervised ML pipeline using K-Modes clustering to identify interpretable patient subgroups from categorical clinical and socioeconomic data.
- Built an interactive Streamlit interface for cluster exploration and analysis of subgroup-level patterns.

Technical Skills

Programming:	Python, C, C++, Java
Machine Learning:	NLP, OCR, Classification, Regression, Clustering, K-Modes, Model Training Pipelines, Data Processing, Dataset Engineering, LLM Applications, Agentic AI
Frameworks:	PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Streamlit, Django
MLOps & Engineering:	Git, GitHub, Docker, Modular Architecture, Reproducible ML Workflows, Experiment Tracking, Data and Model Versioning, Scalable ML System Design
Enterprise & Integration:	Microsoft Dynamics 365, Dataverse, Gemini API, Vercel, Jupyter Notebook, SQLite, MySQL
Web Technologies:	HTML, CSS, Bootstrap, Tailwind CSS, Responsive UI Development
Core Concepts:	Data Structures & Algorithms, Problem Solving, Optimization Techniques, System Design Fundamentals

Achievements

- Patent-related Methodology Contribution:** Contributed to methodology for rheumatoid arthritis patient stratification using K-Modes clustering and categorical clinical data.
- 12+ AI, ML and Full-Stack Projects:** Built and deployed projects spanning machine learning, NLP, OCR, enterprise applications, data processing, and AI-powered systems.

Education

Lovely Professional University

B.Tech in Computer Science and Engineering – Machine Learning, CGPA: 8.32 / 10

Punjab, India

2023 – Present

Himgiri Public School

Class XII – 74.83% | Class X – 78%

Samalkha, Haryana, India

2020 – 2022
